

# Nikkei 225 Climate Change 1.5°C Target Index

An FT Wilshire Climate Series Index

## Index Guidebook

Nikkei Inc.

- This document is the index guidebook of the Nikkei 225 Climate Change 1.5°C Target Index calculated and published by Nikkei Inc. (Nikkei). The document is drawn up by Nikkei and it would be changed or modified corresponding to the revision of the index calculation rule etc.
- Copyright of this document is owned by Nikkei, and any copies, reprints and reproduction of this document are prohibited without the prior approval of Nikkei. This document is prepared solely for the understanding of the index that Nikkei calculates and publishes, and it is not to be construed as a solicitation or an offer to buy or sell any securities or related financial instruments.
- This English document is a translation of the original document and may not be an entirely accurate translation of the original Japanese document. In any case where differences arise between the English version and the original Japanese version, the original Japanese document will prevail.

(May 30, 2022 version)

## 1: Introduction

The Nikkei 225 Climate Change 1.5°C Target Index is an index based on the Nikkei Stock Average (Nikkei 225) where the weights of the constituents are adjusted so that its overall Green House Gas (GHG) emissions (as normalized by enterprise value) of the index is 50% lower than that of the Nikkei 225, and will be further decreased by 7% in coming years. The index complies with the minimum standards for EU Paris-aligned Benchmarks (PAB) and is developed in association with US headquartered Wilshire. Wilshire provides “Wilshire Climate Content”, which means the climate change model and any other content as developed, modified or provided by Wilshire from time to time to be included in and/or applied to the index.

## 2: Name

(Japanese)

Official : 日経平均気候変動 1.5°C目標指数

Abbreviation : 日経気候変動指数

(English)

Official : Nikkei 225 Climate Change 1.5°C Target Index

Abbreviation : Nikkei Climate 1.5°C Target Index

## 3: Constituents management

### (1) Basic Point

- The constituents of the Nikkei 225 Climate Change 1.5°C Target Index (Nikkei Climate 1.5°C Target Index) are those of the Nikkei 225 where constituents meeting certain criteria are removed. The number of the constituents is variable.
- The constituents are reviewed twice a year at the end of April and October. The constituents removed from the Nikkei 225 upon extraordinary events will also be removed from the index. No addition will be made upon the extraordinary removal in principle.

### (2) Periodic Review

- “Base dates” for the review are the 2nd business day of April and October each year. From October 2022, constituents are reviewed in the following rules and the results will become effective from the last business day of the month. The results will be announced with an appropriate notice period.
- If an issue of the constituent stocks meets the following criteria, such

constituent will be excluded. For details, refer to “[Paris-Aligned Benchmarks Exclusion Criteria](#)” of Wilshire (a Wilshire Climate Content).

- Involved in any activities related to Controversial weapons
- Involved in Cultivation and production of tobacco
- Violation of the United Nations Global Compact (UNGC) principles or the Organization for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises
- Derives 1% or more of its revenues from exploration, mining, extraction, distribution or refining of hard coal and lignite
- Derives 10% or more of its revenues from exploration, extraction, distribution or refining of oil fuels
- Derives 50% or more of its revenues from exploration, extraction, manufacturing or distribution of gaseous fuels
- Derives 50% or more of its revenues from electricity generation with a GHG intensity of more than 100g CO<sub>2</sub> e/kWh
- Found or estimated to significantly harm environmental objectives

### (3) Extraordinary (non-periodic) removal

- If a constituent is removed from the Nikkei 225, such a constituent will also be removed from the Nikkei Climate 1.5°C Target Index on the same day. No replacement will be added in principle.

### (4) Constituents on inception and in retroactive calculation

- The constituents used to calculate historical (backward) index under 4-(7) below were chosen as if the constituents were reshuffled by the periodic reviews in April and October each year. The reshuffles were effective on the last business day of the month with the based date which is a day before such effective dates. The constituents as of the start of the index publication (May 30, 2022) were chosen with the base date of April 4, 2022 and became effective from the last business day of the month.

## 4: Index Calculation

### (1) Basic Point

- The weight for the constituents is based on the weight on Nikkei 225 and is adjusted by each company's GHG emission intensity and the balance of sectors. For details regarding GHG emission of each constituent, refer to “[Carbon Emissions Model](#)” of Wilshire (a Wilshire Climate Content).
- The index level on October 30, 2020, the calculation base date is 22,977.11

same as the value of the Nikkei 225 on the same date.

- The unit of the index is “Yen”(Japanese). The 3rd digit is rounded to make the index have 2 digits after the decimal point.
- Calculated on an end-of-day basis, using the share prices on the Tokyo Stock Exchange.

## (2) Calculation Formula

- The daily index value shall be calculated by the following formula.

$$\text{Index value} = \Sigma \{ \text{Share price} \times \text{Weight Factor} \} / \text{Divisor}$$

## (3) Share price

- Priority in the usage of prices are as follows:  
(i) Special Quote or sequential trade quote, (ii) Closing price, (iii) Base price  
(The base price is obtained based on the priority order of ex-rights theoretical price, the last special quote price or sequential trade quote price on the previous day, and the closing price on the previous day.)

## (4) Weight Factor

- The Weight Factor used for the index calculation (number of shares for the index) shall be compiled on the Base Date of the Periodic Review by the following formula. It is rounded down to integer number, truncating after the decimal points.

$$\text{Weight Factor} = \frac{\text{GHG emission adjusted weight}}{\text{Share Price on the Base Date} \times 10^{12}}$$

### (i) GHG emission adjusted weight(%)

GHG emissions adjustment weights are based on the weights in the Nikkei 225 and are adjusted subject to the following condition. For details, refer to “[Climate Change Indexes](#)” of Wilshire (a Wilshire Climate Content).

- GHG emission intensity of the index is reduced by at least 50% compared to the Nikkei 225
- GHG emission intensity of the index is reduced by at least 7% annually year-on-year
- Weights of High Climate Impact Sector keep the same level as the Nikkei

225

- Each weight of the Nikkei's 6 sectors used to select constituents for the Nikkei 225 is within  $\pm 5\%$  of that of the Nikkei 225
- The capping of each constituent weight is 10% or 10 times of the same stock in the Nikkei 225

(ii) Split or reverse split of the constituent stock

After the Weight Factors are assigned, if an index constituent company makes a stock split or reverse split, the Weight Factor shall be adjusted corresponding to the ratio of the split or reverse split on the ex-date.

(5) Divisor

- The Divisor on October 30, 2020, the calculation base date is determined by the following formula.

$$\text{Divisor} = \frac{\sum \{\text{Share prices} \times \text{Weight Factor on the calculation date}\}}{22977.13}$$

- After the calculation base date, the Divisor will be changed every time when the index constituents are changed by using the following formula.

$$\begin{aligned} \text{Divisor tomorrow} &= \text{Divisor today} \\ &\times (\sum \{\text{base prices next day of the index constituents for the next day} \\ &\quad \times \text{Weight Factor for the next day}\}) \\ &/ (\sum \{\text{base prices today of the today's constituents} \\ &\quad \times \text{today's Weight Factor}\}) \end{aligned}$$

- 5th digit is rounded to make the Divisor have 4 digits after the decimal point.

(6) Modification of the index value

- If any event occurs and comes out at a later date where it is necessary to modify the index value, as a general rule, Nikkei reflects the modified data into the index value on the index calculation date coming subsequently after the event comes out, as the date when the event occurs. Retroactive calculation for the modification will not be conducted in principle.

(7) Retroactive calculation in the past

- The index is retroactively calculated to October 30, 2015 on an end-of-day basis.
- The constituents used for the retroactive calculation are determined as described in 3-(4).

**5: Others**

(1) Total Return Index calculation

Nikkei calculates “Nikkei 225 Climate Change 1.5°C Target Index (Total Return)” and “Nikkei 225 Climate Change 1.5°C Target Index (Net Total Return)” as the related indexes of the “Nikkei 225 Climate Change 1.5°C Target Index” by adding the dividends and the net dividends excluding taxes respectively. These indexes are calculated on an end-of-day basis.

The basic points for the total return calculation such as the method to incorporate dividends conform to the Nikkei 225 Total Return Index and the Nikkei 225 Net Total Return Index.

(2) Index License

“Nikkei 225 Climate Change 1.5°C Target Index” is a copyrighted material calculated in a methodology developed and created by Nikkei Inc in association with Wilshire Opco UK Limited (“Wilshire”). Nikkei Inc. is the sole exclusive owner of the copyright and other intellectual property rights in the Nikkei 225 Climate Change 1.5°C Target Index itself, the methodology to calculate the Nikkei 225 Climate Change 1.5°C Target Index and the Nikkei Stock Average, the base, i.e. universe for the constituents of the Nikkei 225 Climate Change 1.5°C Target Index. Licensing agreement with Nikkei is necessary if companies intend to create financial products using the Nikkei 225 Climate Change 1.5°C Target Index and or to disseminate or provide it to third parties.

All intellectual property rights in and to any Wilshire Climate Content provided for the creation of the “Nikkei 225 Climate Change 1.5°C Target Index” and / or data obtained by Wilshire under agreement with its data provider (ISS ESG) and data derived from any of the foregoing will be owned by and belong exclusively to Wilshire or its licensor. All rights reserved.

### (3) Disclaimer

Nikkei has no obligation to publish the Nikkei 225 Climate Change 1.5°C Target Index continuously, and Nikkei is not responsible for any error, delay or omission in the Nikkei 225 Climate Change 1.5°C Target Index. Nikkei is entitled to change the details of the Nikkei 225 Climate Change 1.5°C Target Index and to suspend or stop the calculation and the announcement of the index.

Although, in principle, the Nikkei 225 Climate Change 1.5°C Target Index is calculated and maintained in accordance with the information provided here, Nikkei has discretion to take measures Nikkei deems appropriate when the events which are not covered in this document happen or under the circumstances where it is difficult to continue to calculate the index using the current rules. In addition, the specifications described may be amended without notice. Nikkei does not assume any loss or damage caused by the use of this document.

The Wilshire Climate Content is based upon information generally available to the public and from third party sources believed to be reliable.
